CI/CD PIPELINE ASSESSMENT

Is your code getting stopped
where it shouldn't?

INTRODUCING AWS CODEPIPELINE

CI/CD is supposed to make your application development and operations more coordinated and efficient. If your CI/CD pipeline is cumbersome and disjointed, you might want to see if AWS Codepipeline would be an applicable option for your organization. There are <u>no upfront fees or long-term commitments</u>.

In a 2-3 week engagement, AIM Consulting can assess your current CI/CD pipeline, conduct a simulation, and build out a proof-of-concept.

PROCESS AND DELIVERABLES

1
Conduct a situational-specific assessment of your application and environment.

2
Present a solution design document and migration roadmap with reference diagrams of the current state against best practices.

3
Select a proof-of-concept application or service for trial migration.

4
Perform the proof-of-concept migration, document learnings, and update the migration roadmap.

5
Facilitate the migration components in the updated migration roadmap.

We are a rapidly growing leader in technology consulting services and solutions delivery that helps companies compete effectively in the digital world. Learn more at aimconsulting.com.
